

ERXMonthView

To use this component put this in your .java file:

```
public ERXDateGrouper aGrouper = new ERXDateGrouper();
```

and bind aGrouper in your WOD:

```
<webobject name = "monthView"></webobject>
```

```
monthView : ERXMonthView {  
  grouper = aGrouper;  
}
```

The result is a nice little calendar component that you can further customize (a year display was added to this one).
