

Recommended Eclipse Configuration

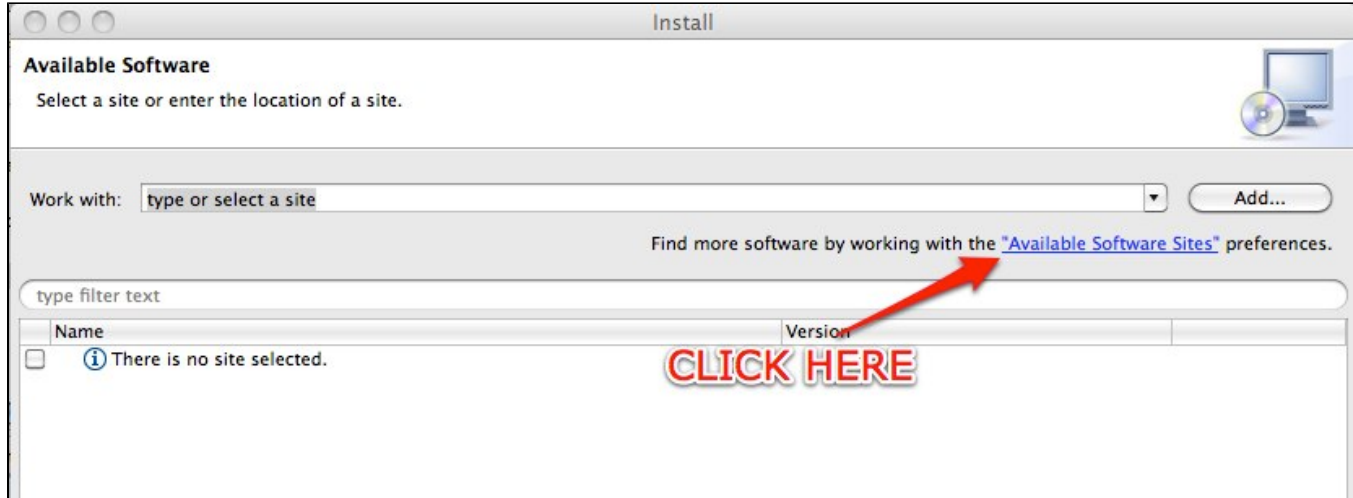

Just run this script [Bash script to download Eclipse and install everything in OneStep.](#)

The above replaces everything below for Eclipse 3.6.1 for Mac OS X

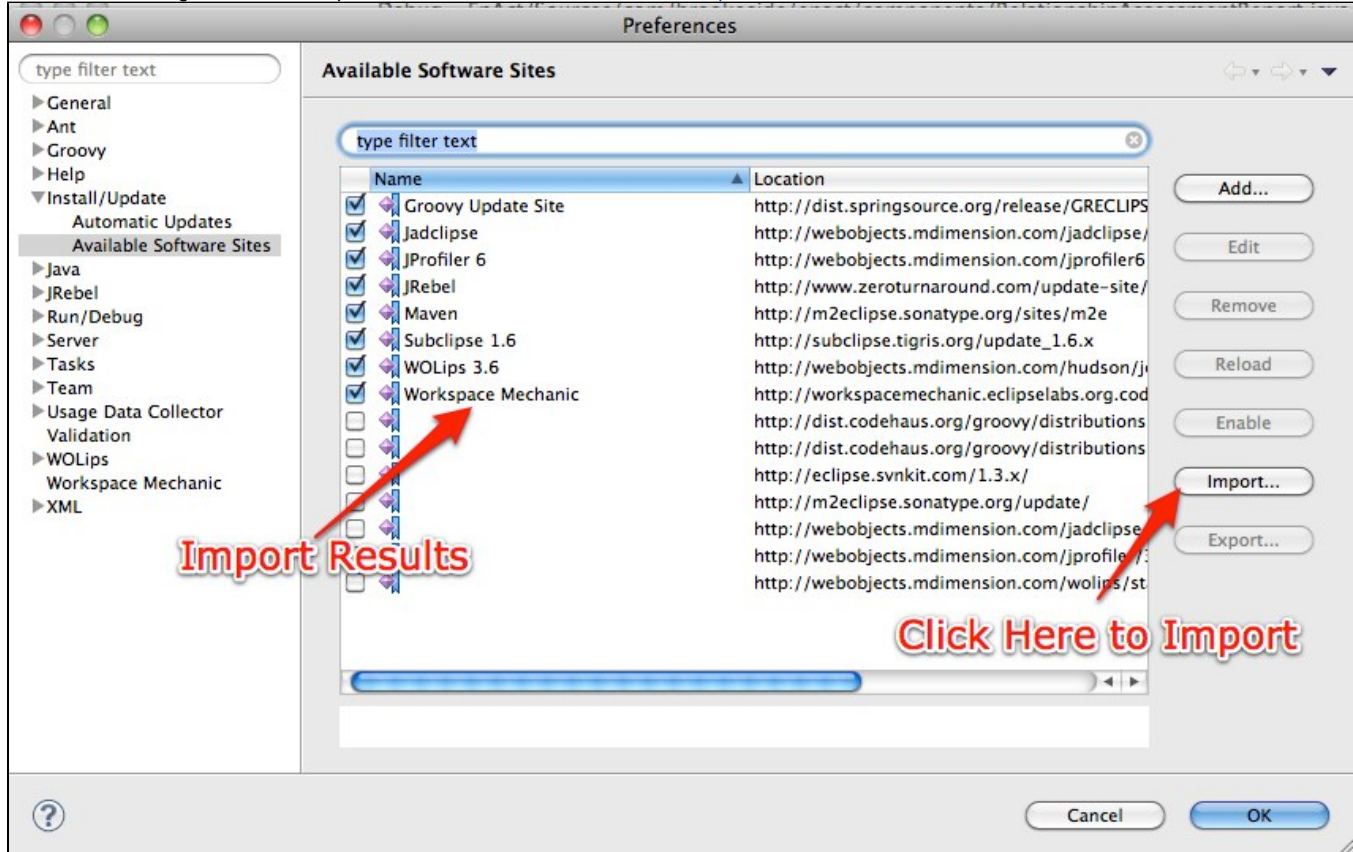

Download this file [RecommendedUpdateSites.xml](#)

In Eclipse.

Help=>Install New Software...
Click "Available Software Sites"

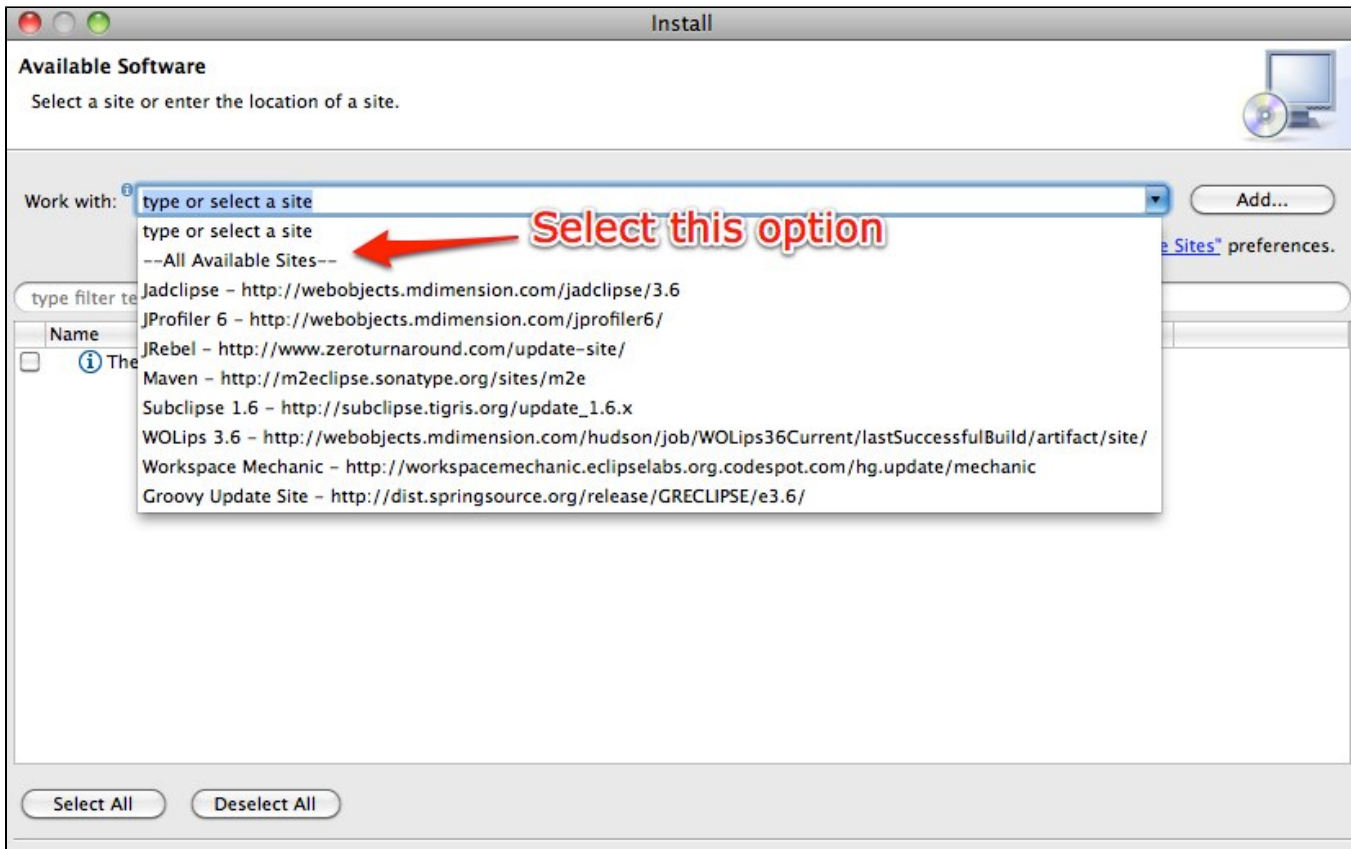

On the Modal Dialog box Click the Import button and select the [RecommendedUpdateSites.xml](#) file.

Import... Download and select
Click "OK"

Under Work with, select "All Available Sites"

Then select individual sites to configure.

Select WOLips => WOLips
 Select WOLips (Optional) => WOLips Goodies

If you want SVN Support:
 Select Collaboration => Subversive SVN Team Provider

If you want Git Support (and who doesn't):
 Select Collaboration => Eclipse EGit
 or
 Select Eclipse Git Team Provider => Eclipse EGit
 (also make sure you have git installed from <http://http://git-scm.com/>)
 (also go to github and fork WOnDer <https://github.com/wocommunity/wonder>
 more information on getting WOnDer source is at [Getting the Wonder Source Code](#))

If you want Jadclipse (to decompile class file):
 Select Uncategorized => Jadclipse Feature
 (also install jad from <http://www.varanekas.com/jad> into /usr/local/bin/jad)

If you want to use WOLips Groovy Support:
 Select Groovy-Eclipse => Groovy-Eclipse Feature
 Select WOLips => WOLips Groovy Support

If you want to use WOLips JRebel Support:
 Select JRebel => JRebel Eclipse Integration
 Select WOLips => WOLips JRebel

If you want to use WOLips JProfiler Launching:
 Select Uncategorized => JProfiler
 Select WOLips => WOLips JProfiler Launching

If you want to use Workspace Mechanic:
 Select Collaboration => Mylyn Task List (Required)
 Select Collaboration => Mylyn Task-Focused Interface (Recommended)
 Select Workspace Mechanic for Eclipse => Workspace Mechanic

Click "Next >" and Approve all the licenses, etc.

Restart Eclipse

If you want shared workspace settings:
Download [WorkspaceMechanicExamples.zip](#)
Unzip into ~/.eclipse (make it if it doesn't exist)

Restart Eclipse

Recording Your Own Preferences in Workspace Mechanic

In workspace mechanic, right-click on the icon and select "Preference Recorder > Start Recording" to record your own preference changes. Once you are finished, select "Stop Recording" and save the resulting file to your ~/.eclipse/mechanic folder created above. Use the .epf file extension for your preference change to be picked up when you open other workspaces.
