

# Content Assist for WOD Files

This **should** just work out of the box. It does not for some people, I don't know what is different for them. Here is how to turn it on if it is not working for you, or how to change the key bindings. Go to **Window - Preferences** and navigate to **General > Keys**. Ignore the scheme as show in the image below, you can use whatever scheme you want. Select **Edit** for the **Category** and **Content Assist** for the Name. Look under **Assignments** for **Editing Wod Files**.

If you see it, you can select it and edit the binding in the **Key Sequence** panel. If you don't see **Editing Wod Files**, select it under **When** and click **Add**.
