

# Troubleshooting WOStats

## Typo in WOStatsPage.html in WO 5.3

There is a typo *in WebObjects 5.3* that prevents the login from being displayed. To fix:

```
sudo emacs  
/System/Library/Frameworks/JavaWOExtensions.framework/Resources/WOStatsPage.  
e.wo/WOStatsPage.html
```

Edit this line:

```
<webobject name="USERname"></webobject>
```

to read

```
<webobject name="USERNAME"></webobject>
```

(it is a case issue).

## Set a WOStats Password

Don't forget to set a password when launching using `-WOStatisticsPassword foo`  
If you don't set a password, access is disabled entirely.
