

Squeryl Entity.eotemplate

This set of templates will generate a Squeryl schema from an EO model. Still basic/proof-of-concept templates. Of course, you may customize them further.

Limitations

- Single-package/single-model schemas only
- No support for object inheritance

```

#if ($entity.packageName)
package $entity.packageName
#endif

import java.util.Date

class ${entity.classNameWithoutPackage}(
## 
##java -> Scala types go here
##
#foreach ($attribute in $entity.sortedAttributes)
#if ($attribute.javaClassName.equals("Integer")) #set( $scalaClassName =
"Long" )
#elif ($attribute.javaClassName.equals("String")) #set( $scalaClassName =
"String" )
#elif ($attribute.javaClassName.contains("BigDecimal")) #set(
$scalaClassName = "BigDecimal" )
#elif ($attribute.javaClassName.equals("NSTimestamp")) #set(
$scalaClassName = "Date" )
#elif ($attribute.javaClassName.equals("NSData")) #set( $scalaClassName =
"Array[Byte]" ) #end
    val ${attribute.name}:#if ($attribute.allowsNull)
Option[$scalaClassName]#else $scalaClassName#end#if
(!$attribute.equals($entity.sortedAttributes.last())),
#else
#end
#end) extends _${entity.classNameWithoutPackage}(
##
##java -> Scala types go here
##
