

WOLips Tutorials

Installation

- Project Wonder Installation on Mac OS X
- Setup of WOLips for developing with multiple versions of WebObjects
- Project Wonder Installation on Windows
- Useful Eclipse Plugins
- Useful Eclipse or WOLips Preferences

Migrating from Xcode

- Upgrading to WOLips from Xcode or Project Builder
- Import an Xcode project into WOLips
- Using the XcodeMigration tool

Setting Up a Project

- Create a new WO Application
- Setting the default text encoding for Eclipse
- Add a Jar Dependency
- Add a Framework Dependency
- Create a WebObjects Framework
- Working with the Jars in WebObjects Extensions
- Custom Project Templates
- About the Properties file

Troubleshooting Build Problems

- General Problems Building and Running
- Sticky WOD error markers will not go away

Editing WOComponents

- Create a new WO Component
- Edit a WO Component
- Using WOBuilder with WOLips
- Content Assist for WOD Files
- Modern Binding Styles
- WOOGNL Helper Functions
- Refactor - Rename Binding Feature
- Refactor - Format HTML Feature
- Rename a WOComponent
- Click to Open

Editing EOModels

- Entity Modeler
- Generating Custom EO Java Classes
- EOGenerator
- Using Model Groups
- Creating a Many to Many Join
- Using EntityModeler.app

Eclipse/WOLips Development Tips

- Keyboard Shortcuts
- "File-hopping" Navigation in Eclipse
- Best Eclipse Resources

Running and Debugging

- Debug Code in a Framework
- Click to Debug
- Using the debugger

Deployment

- Deploy a WO Application
- Split Install Deployment
- Change default application bundle names
- Embedding WOFrameworks
- Alternative Ant Build Script for Fully Embedded and Split Install Bundles
- Remote deployment with Ant and ssh

Maven (Alternative build environment)

- Maven Hello WOWorld
- Maven Create WO Application Project
- Maven Running or Debugging as WO Application
- Maven Kicking the tyres without changing your project structure
- Maven Creating Wonder Applications
- Maven Creating Wonder Frameworks

Misc

- Pesky 'Serializable class without serialVersionUID' Warnings
- Pesky WOComponent Errors

Beginner's Guides

- Beginner's Questions
- JDBC and Entity Modeler, issues and configuration
- How do I add a static image to a component's page?
