

# Database Compatibility and Comparisons-PostgreSQL

Yes, PostgreSQL does work with WebObjects. The best place to start is the [Project Wonder PostgreSQLPlugin Page](#).

If you're on a Mac, Apple has an [article](#) on installing PostgreSQL on Mac OS X that is pretty straightforward.

Mark Liyanage builds an installer for postgresql. Have a look at [entropy](#)

Another way to get postgresql installed is to use one of the installers that maintain a complete ports tree. There is [Fink](#) and [Macports](#). Both can be used via a graphical installer, in fink it is included. For macports you can use [porticus](#).

If you're interested in a nice graphical interface to managing your PostgreSQL installation, you may want to check out [Navicat PostgreSQL](#) from Navicat.
