

# Wonder 6.0.0 release

Release 6.0.0 (aka "The Cleanup Release") have been released in the master branch of Project Wonder! Johann Werner wrote a nice [change log](#) on GitHub:

In short, we moved obsolete frameworks and examples to a Archives directory, JasperReport has been updated to v4.7 and all references to WO 5.3.3 have been removed.

The previous release of Wonder 5.x is available in the "wonder\_5" branch. This branch won't have any commit activity in it, unless we need to commit a fix for a major bug (or if people are willing to submit pull requests to maintain it).

Many thanks to everyone who contributed to this release!
