

# Lion support

With the release of Lion, we want to assure you that Eclipse and all of the other tools and frameworks works well on Lion. Please be aware that Java is not installed by default on Lion, to install it open any Java application (it could be /usr/bin/java) and the Finder will ask if you want to install Java.

If you are launching wotaskd, be aware that the user in the launchctl script have to be "\_appuser", wotaskd won't be started if the user is "appuser".
