

WOProject-Maven

This is the home page for the Maven Plugins space.

Maven \geq 3 is recommended.

See [Maven download](#).

See [Maven release notes](#) for further information.

Note: on mac you can use macports to install. See the [Quick Start](#) tutorial.

Note: Maven 1 is no longer supported. Maven 2 will work, but resolves dependencies to the latest snapshot rather than the latest release. Use Maven 3 where possible.

WOProject Maven2 Plugins

- [maven-japplication-plugin](#): A Maven plug-in for assembling native launchers of Java applications for a number of OS platforms.
- [maven-wobootstrap-plugin](#): A plug-in to install/deploy WebObjects libs into Maven repositories.
- [maven-wolifecycle-plugin](#): A plug-in to build WebObjects applications and frameworks with Maven.
- Maven2 WebObjects Archetypes
 - [woapplication-archetype](#) (new)
 - [maven-archetype-woapplication](#) (deprecated)

Additional Documentation

- [Quick Start](#): A short tutorial demonstrating how to create a project and start developing with Maven.
- [Packaging WO Applications as true WAR with Maven](#): The steps required to build your WebObjects project as a true WAR.
- [General Maven Documentation](#): A review of some basic Maven concepts. It could be useful for users starting to use Maven for the first time.

WOProject Maven Development

- [Roadmap](#): Describes the next steps for WOProject Maven development.
