

Client-Side Entity.java Template

```
#if ($entity.packageName)
package $entity.packageName;

#end
import org.apache.log4j.Logger;

import com.webobjects.eocontrol.EOEditingContext;

public class ${entity.classNameWithoutPackage} extends ${entity.prefixClassNameWithOptionalPackage} {

    @SuppressWarnings("unused")
    private static Logger log = Logger.getLogger(${entity.classNameWithoutPackage}.class);

    public ${entity.classNameWithoutPackage}() {
        super();
        // Don't do anything here! All initial object setup must
        // be done in the awakeFromInsertion(EOEditingContext) method.
    }

    @Override
    public void awakeFromInsertion(EOEditingContext ec) {
        super.awakeFromInsertion(ec);
        /*
otherwise
        * All attributes you set here should be wrapped in a if(attribute == null) conditional,
into
        * many bad things can happen as new instances are copied back from the java client and inserted
        * the server-side editing context!
        */
    }
}
```
