

Development-Examples-List Components

So you have a title and a "list" of objects. The list has a minimum and maximum number of objects to display. If there is "too many" objects there is a "more..." link.

Here is the html:

```
<webobject name="HasData">
  <webobject name="Title"></webobject>
  <br>
  <webobject name="Items">
    <webobject name = "Item"></webobject><br>
  </webobject>
  <webobject name="HasMore">
    <webobject name = "MoreLink"><span class = "Label"><small><webobject name = "MoreCount"></webobject>
more...</small></span></webobject><br>
  </webobject>
  <div class = "Space"></div>
</webobject>
```

And here is the wod:

```
HasData: WOConditional {
  condition = hasData;
};

Title: SpanString {
  value = title.toUpperCase;
  isSmall = true;
  isBold = true;
  class = "Label";
};

Items: WOREpetition {
  count = count;
  index = index;
};

Item: SZLink {
  value = item;
  description = description;
  altDescription = altDescription;
  href = href;
  pageName = pageName;
  isSmall = true;
  class = "Label";
};

HasMore: WOConditional {
  condition = hasMore;
};

MoreCount: SpanString {
  value = moreCount;
};

MoreLink: WOHyperlink {
  action = displayMore;
};
```
