

Troubleshooting WOStats

Typo in WOStatsPage.html in WO 5.3

There is a typo in *WebObjects* 5.3 that prevents the login from being displayed. To fix:

```
sudo emacs /System/Library/Frameworks/JavaWOExtensions.framework/Resources/WOStatsPage.wo/WOStatsPage.html
```

Edit this line:

```
<webobject name="USERname"></webobject>
```

to read

```
<webobject name="USERNAME"></webobject>
```

(it is a case issue).

Set a WOStats Password

Don't forget to set a password when launching using `-WOStatisticsPassword foo`
If you don't set a password, access is disabled entirely.
