

Known bugs

What version of WebObjects am I running? (This really doesn't belong in 'bugs', but I don't know where else to put it)

From the terminal:

```
grep -A 1 CFBundleShortVersionString /System/Library/Frameworks/JavaWebObjects.framework/Resources/Info.plist
```

which will return something like mine (5.4.3):

```
<key>CFBundleShortVersionString</key>  
<string>5.4.3</string>
```

Thank you Chuck
