

WOCOM

WOCOM - The WebObjects Community Wiki

WebObjects is a an integrated suite of freely available Java frameworks and tools that helps a developer to develop scalable, sophisticated applications for the Internet on most computers with Java support. This is the Wiki for the WebObjects Community. It aims to collect community resources and initiatives as well as point to existing WebObjects information available.

This site is managed by the Atlassian Confluence Enterprise Wiki software. The wiki consists of a number of confluence "spaces" which are listed if you click the [Dashboard](#) link in the upper left hand corner of this page. The Search box in the upper right allows you to conveniently search all "spaces" and pages in the wiki.

If you are a WebObjects developer, you are encouraged to sign up for a confluence account (account required to prevent wiki spammers) so that you can share your knowledge with the community. The more people contributing, the better the quality, accuracy and usefulness will be of the information here.

You can start on this page [WO Resources and Ideas](#) while this Wiki is being expanded.

We appreciate the help of everyone in the WebObjects community to expand and keep the information current, thanks.

An official mailing list for WebObjects is available here: <http://lists.apple.com/archives/Webobjects-dev> . A separate community mailing list is available below.

WOCCommunity Efforts

There are plenty of ways you can get involved with the community. View the [WOCCommunity Efforts](#) page to see where you can help out.

Wiki TO DO List
