

# How to set up the Properties of a Diva app

## How to set up the Properties of a Diva app

You will need to set up the following properties for an app that uses ERDivaLook.

```
#####  
ERDivaLook pref  
#####  
  
er.extensions.ERXLocalizer.frameworkSearchPath = (app,ERDivaLook,ERDirectToWeb,ERExtensions)  
er.prototaculous.useUnobtrusively=true  
  
#####  
Thread-safe pref  
#####  
  
WOAllowsConcurrentRequestHandling=true  
  
er.extensions.ERXEC.safeLocking=true
```

Perhaps it is stating the obvious, but the property **WOAllowsConcurrentRequestHandling** should be enabled for use in an [Ajax](#) application like an ERDivaLook app.

The last property above is typically set in a *multi-threaded* Wonder application.

Note

It is a requirement to make your Diva look application *thread-safe* if you're using concurrent request handling.
