

Layout of a Diva Look Page

div#a - 'a' is for 'ajax'

The D2W page content is contained inside `div#a`.

This is the only pre-requisite of the PageWrapper in a Diva look D2W app: that it places its contents inside a `<div id="a">`.

See `Wonder/Examples/Ajax/ERDivaLookExample`.

div#a - the Primary Ajax Update Container

In a Diva D2W app, `div#a` is the primary update container.

Here, ajax page configurations like `AjaxQueryMovie` will update the contents of `div#a`.
