

# EOF-Using EOF-Configuration Settings

- -EOAdaptorDebugEnabled YES/NO  
(true for WO5)  
turns on Adaptor logging. This gives you the SQL statements that are issued against your database.
- -EOAdaptorUseBindVariables YES/NO  
(false for WO5)  
(this one is quite hidden in the docs) Turns off bind variables on the SQL statements, making SQL much more readable when debugging.
