

Project WONDER-Frameworks-Ajax-AjaxDroppable

AjaxDroppable

AjaxDroppable represents the second half of the drag-and-drop implementation in Ajax framework. AjaxDroppable also uses a WOComponentContent, so any content that you would like to appear in the drop target should be inside of the AjaxDroppable's webobject tags.

An example of the Scriptaculous drag-and-drop is available [here](#).

Wonder Bindings

- id (required) - the ID of the Droppable element
- elementName - the name of the HTML element to wrap the Droppable, either: "div" or "span"
- droppedDraggableID - the draggableID of the Draggable that was dropped on this Droppable
- action - the action that is fired when the drop occurs
- droppedObject - the object that was dropped (if droppableObject was bound on the AjaxDraggable)

Scriptaculous Bindings

[Scriptaculous Documentation](#)

- accept
- containment
- hoverclass
- overlap
- greedy
- onHover
- onDrop
