

# Project WONDER-Frameworks-Ajax-AjaxUpdateLink

## AjaxUpdateLink

AjaxUpdateLink provides a WOHyperlink-like wrapper around an update trigger for an [AjaxUpdateContainer](#). AjaxUpdateLink uses a WOComponentContent, so any text that should appear as part of the link should be enclosed between the AjaxUpdateLink's webobjects tags.

## Wonder Bindings

- action (required) - the action to fire when the link is pressed
- updateContainerID - the ID of the AjaxUpdateContainer to refresh when the link is pressed

## Prototype Bindings

- onComplete
- onSuccess
- onFailure
- onException
- insertion
- evalScripts
